Computer Science Principles

Unit Journal

Unit 2: The Internet

Getting Started: Directions

Print out copies of each page for each student. Each page has its own list of Materials Needed.

There are various Unit Journal activities that are associated with lessons throughout this unit of study.

Look for the *Unit Journal icon* in course slides in order to know when there is an associated activity in the Unit Journal.

Materials Needed

Pencil or Pen

EXAMPLE

Notes

The main idea of today's lesson was...

Interactive Notebook Directions

1. Take notes, while answering the prompt
   - The main idea of today's lesson was...

Combine written notes with simple sketches or doodles to help you remember key concepts or ideas. This technique can make your notes more engaging and easier to review.

Materials Needed

Pencil or Pen
Scissors
Tape or Glue

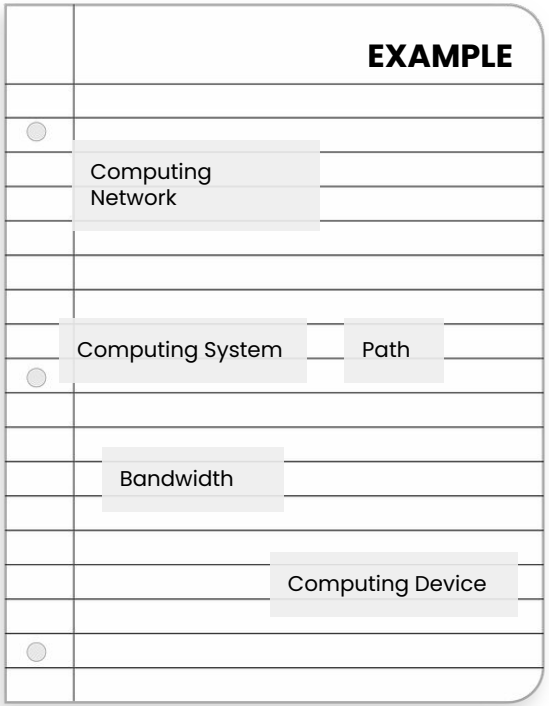

Computing Network

Path

Bandwidth

Computing System

Computing Device

Interactive Notebook Directions

1. Cut out the vocabulary words to the left and paste it into your notebook.

2. Add definitions, images, and representations that are unique and meaningful to you.

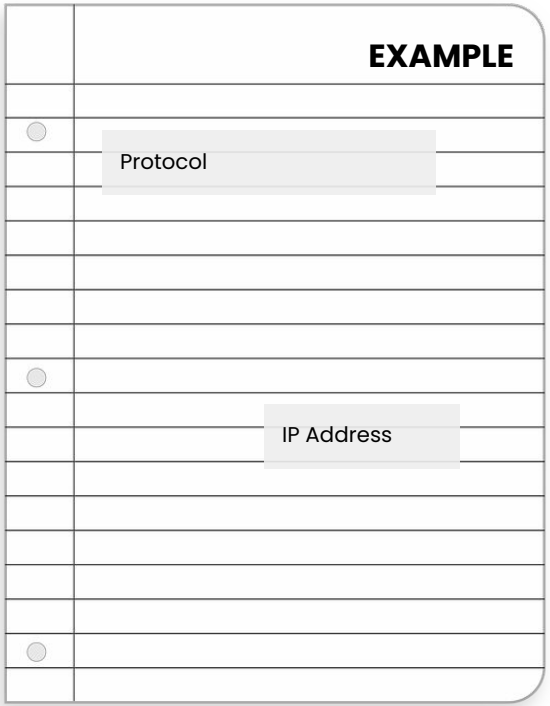

CODE

Materials Needed

Pencil or Pen
Scissors
Tape or Glue

Protocol

IP Address

Interactive Notebook Directions

1. Cut out the vocabulary words to the left and paste it into your notebook.

2. Add definitions, images, and representations that are unique and meaningful to you.

CODE AI

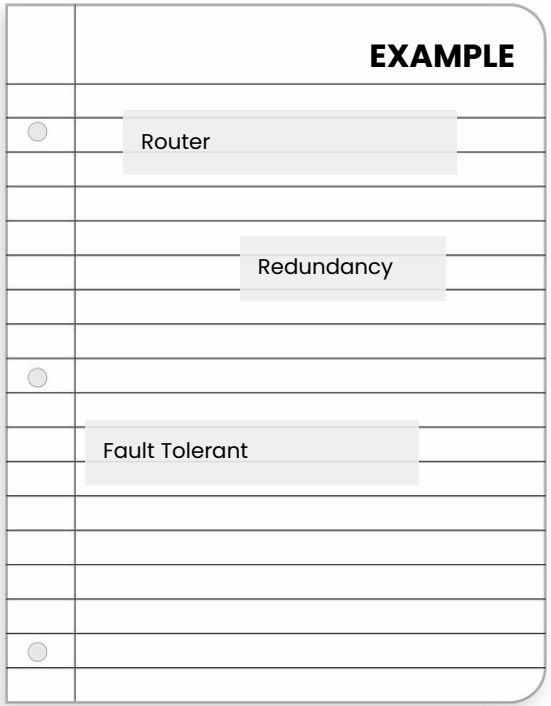

Materials Needed

Pencil or Pen
Scissors
Tape or Glue

Router

Redundancy

Fault Tolerant

Interactive Notebook Directions

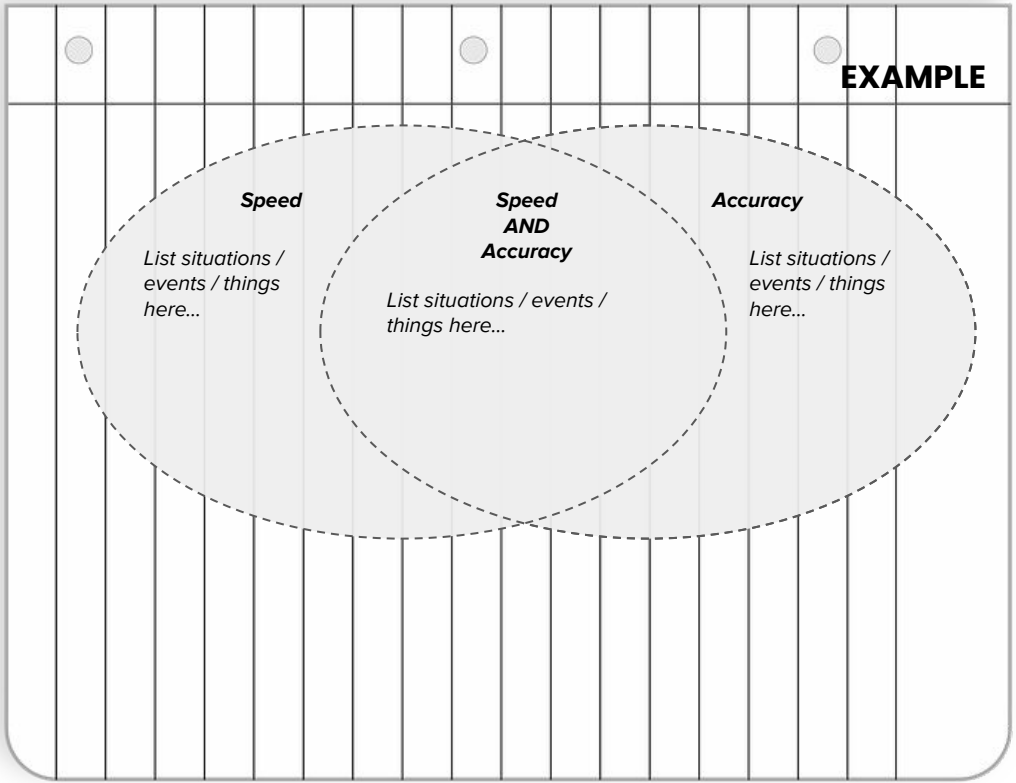

1. Cut out the vocabulary words to the left and paste it into your notebook.

2. Add definitions, images, and representations that are unique and meaningful to you.

CODE AI

Materials Needed

Pencil or Pen
Brainstorming materials

Interactive Notebook Directions

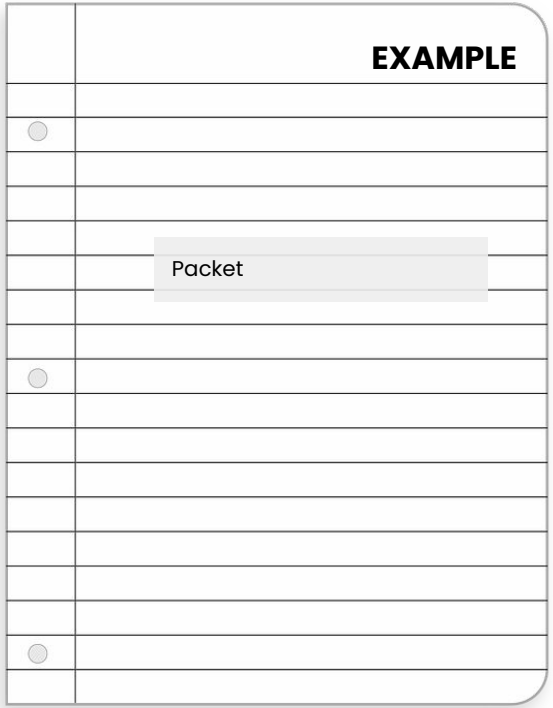

1. Draw a Venn diagram in your notebook. Label one side *Speed*, one side *Accuracy*, and the middle *Speed AND Accuracy*.

2. Brainstorm situations / events / things from your experiences where doing something quickly was most important (speed). Likewise, determine experiences where being correct and precise was most important (accuracy). Last, brainstorm situations when both speed and accuracy are needed.

Materials Needed

Pencil or Pen
Scissors
Tape or Glue

Packet

Interactive Notebook Directions

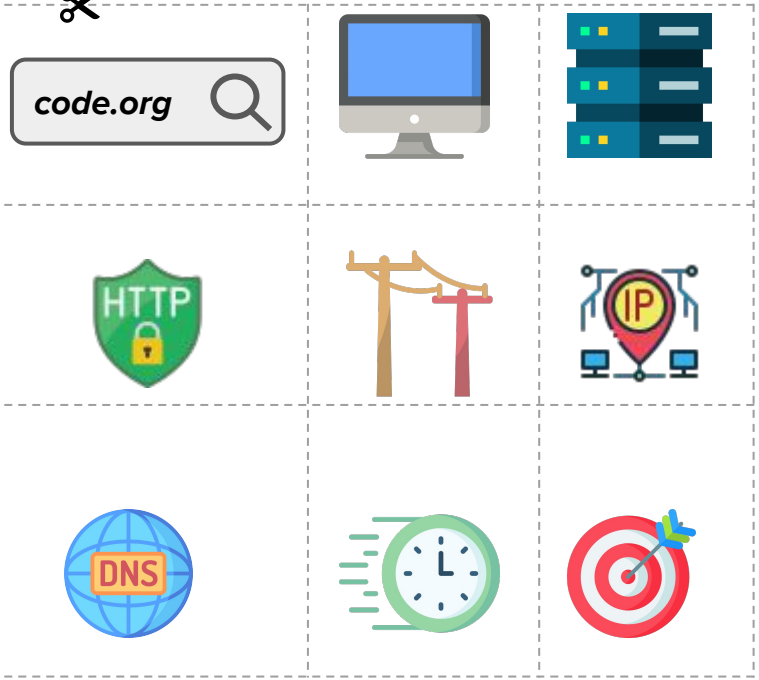

1. Cut out the vocabulary words to the left and paste it into your notebook.

2. Add definitions, images, and representations that are unique and meaningful to you.

Design your own diagram using the provided icons that shows how each of the different layers of the internet are involved when you go to a link like code.org

Materials Needed

Pencil or Pen
Scissors
Tape or Glue
Brainstorming materials

Interactive Notebook Directions

1. Cut out the question to the left and paste it into your notebook.

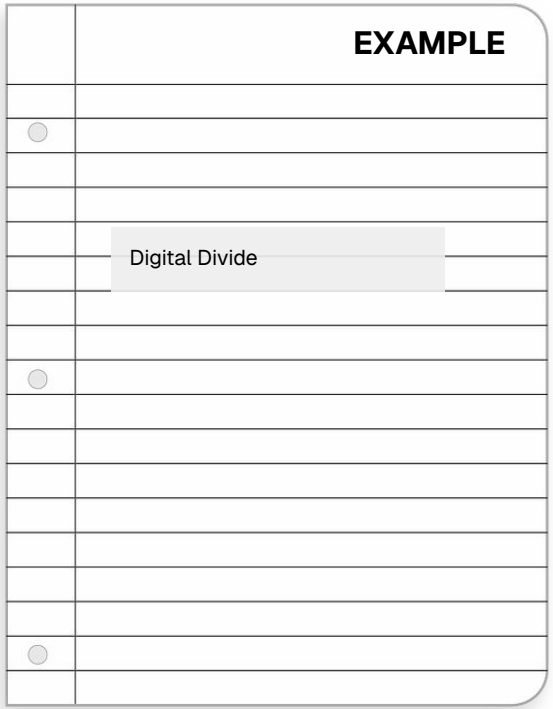

2. Cut out the icons to use in your own diagram.

3. Use the icons in your diagram.

Materials Needed

Pencil or Pen
Scissors
Tape or Glue

Digital Divide

Interactive Notebook Directions

1. Cut out the vocabulary words to the left and paste it into your notebook.

2. Add definitions, images, and representations that are unique and meaningful to you.

Computing Device	Router
Computing System	Redundancy
Protocol	World Wide Web
Computing Network	IP Address
Path	Fault Tolerant
Bandwidth	Digital Divide
Internet Protocol	HTTP
Internet	Packet

Interactive Notebook Directions

1. Cut out the vocabulary words to the left and paste it into your notebook.

2. Use lines and text to create connections between the various vocabulary words that you have been creating with your Vocabulary Canvas journal entries. Not all terms might connect. Sometimes words might have multiple connections that you can explore.

Materials Needed

Pencil or Pen
Scissors
Tape or Glue
